

# HACCP for Packaging

Making sure the Pack fits the Product

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

# HACCP for Packaging

- HACCP well established in food industry worldwide (Codex Alimentarius)
- Principles of HACCP can be easily applied to non-food applications eg Packaging
- **No legal requirement for HACCP in non-food (packaging) site**
- Supplier requirement within standards (GFSI, BRC, FSSC, etc)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## The Food Industry uses: HACCP

**Hazard Analysis and Critical Control Point** A system which identifies, evaluates, and controls hazards which are significant for **food** safety

(Codex Alimentarius Food Hygiene Basic Texts)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## HACCP for Packaging is therefore:

**Hazard Analysis and Critical Control Point** A system which identifies, evaluates, and controls hazards which are significant for **product** safety

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## HACCP Principles

1. Identify potential hazards and measures for their control
2. Determine critical control points (CCP)
3. Establish critical limits which must be met to ensure each CCP is under control
4. Establish a monitoring system
5. Establish the corrective action to be taken when monitoring indicates that a CCP is not under control
6. Establish verification procedures to confirm that the HACCP system is working effectively
7. Establish documentation for procedures and records

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Realistic Hazards – Risks

From BRC/IoP V4 Interpretation Guideline

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## What is packaging?

- Jars
- Bottles
- Cans
- Bags
- Pouches
- Wrappers
- Inserts
- Boxes
- Trays
- Labels
- Plastic
- Glass
- Metal
- Paper
- Board
- Corn Starch
- Banana Skin!

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Why do we need packaging?

- Protect from external influences
- Preserve to extend shelf life
- Promote to sell the product

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Selection Criteria

- Inert and non-toxic
- Be easy for the consumer to use
- Provide product information
- Show evidence of tampering
- Meet required legislation

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Packaging provides barriers

- Microbiological
- Chemical
- Light
- Physical
- Moisture
- Gases
- Temperature control

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## MATERIALS

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Plastic

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Plastics

### Two main types

- Thermosetting eg melamine
- Thermoplastic eg polythene, PET

Easily made into a range of shapes and sizes

Good Moisture barriers

- PP, PE, PVC

Good Oxygen Barriers

- EVOH, PVdC, PET

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Polyethylene (PE)

- Heat-sealable thermoplastic
- Good barrier to water vapour
- Poor barrier (high permeability) to oxygen
- Recyclable
- LDPE - Melting point of 115°C
- HDPE - Melting point 130-135°C

### Applications:

#### LDPE

- Light weight bags
- Heat seal layer laminates
- Film wraps
- Bread bags

#### HDPE

- Rigid bottles
- Trays (microwave)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Polypropylene (PP)

- Heat-sealable thermoplastic (broad spectrum)
- Flexible
- Good barrier to water vapour
- Poor barrier (high permeability) to oxygen
- Recyclable
- Melts at 168 – 170°C

### Applications:

Rigid bottles

Bottle closures

Microwaveable food containers, trays

Sealant layer in retortable pouches

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Polyethylene Terephthalate (PET)

- Heat-sealable thermoplastic
- Fairly good oxygen barrier
- Good water vapour barrier
- Good tensile strength and resistance to puncture
- Recyclable
- Good clarity (amorphous PET)
- High temperature applications (Crystallized PET)
- Melting point 267°C

### Applications:

- Trays (CPET)
- Drink bottles (APET)
- Outer layer of laminate films

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Polyamide (PA) or Nylon

- Heat-sealable thermoplastic
- Rigid, translucent and tough
- Fairly good barrier to gases and flavours
- Fairly poor moisture barrier
- Good tear/puncture resistance
- Recyclable

### Applications:

Strength, rigidity and puncture resistance in multilayer structures

Boil-in Bag applications

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Polyvinyl Chloride (PVC)

- Thermoplastic
- Good barrier to oxygen & moisture
- Excellent resistance to oil & grease
- Recyclable

### Applications:

- Bottles, jars, trays
- Film wraps (Clingfilm)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Polystyrene (PS)

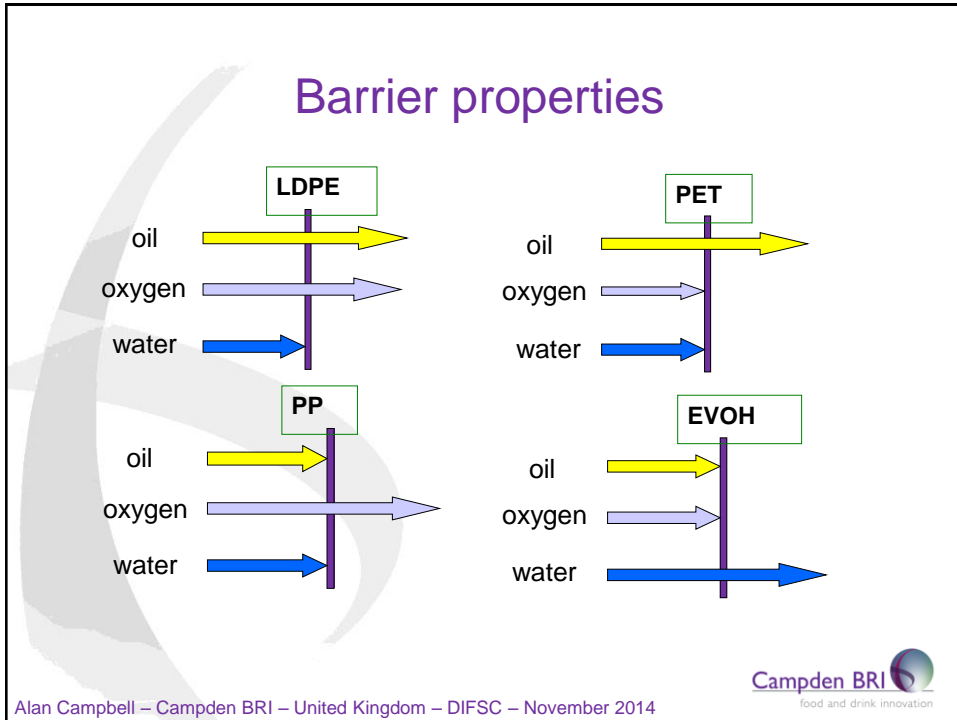

- Thermoplastic
- Hard, brittle and stiff
- Permeability to gases (poor barrier)
- Poor moisture barrier
- Can be foamed (EPS)
- Recyclable

### Applications:

- Salad bowls
- Food service packaging,
- Yogurt pots
- Foamed: Cushion packaging, thermal insulation

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Metal

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Uses of Metal

- Can Making
  - Food
  - Petfood
  - Beverages
- Aerosols
- Closures
  - Crowns
  - Twist-Off
- General Line

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Metal

- Steel or aluminium
- Very good barrier
- Variety of shapes and sizes
- Designed for high speed filling
- Easy open features
- High quality decoration
- 100% recyclable
- Good temperature control

Campden BRI   
food and drink innovation

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Metal

- Corrosion from the food
- Overcome with the use of lacquers or coatings

Campden BRI   
food and drink innovation

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Pull Ends

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Closures - Bottles

ROPP – Roll-on Pilferproof  
Crown (also twist)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Closures – Wide Mouth Jars

Steel (tinplate or TFS)  
Range of sizes and  
Depths  
Twist-Off (lug Caps)  
Lining Compound

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

food and drink innovation

## General Line

These include

- Biscuit tins
- Novelty packs
- Large (25litre) oil drums

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Trays

Takeaway & Ready meal containers made from thicker foil with creased/folded corners

Smoothwall containers - Formed and drawn in similar way to cans

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Thin Foil

Can be as thin as 6 micron

Used for novelty shapes such as chocolates

Good dead fold characteristics

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Household Foil

Vary in thickness from  
11 micron up to 14  
microns

Cut to size and fed  
onto a core before  
being placed into a box

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Paper & Board

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Paper and board

- Good light barrier
- Poor oxygen and moisture barrier
- Lightweight
- Excellent surface for graphics
- Can withstand a variety of temperatures
- Recyclable

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Performance

- Primarily strength
  - Printing
  - Constructing,
  - Packing
  - Protection of goods
    - Storage
    - Distribution
    - Sale
    - Consumer

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Flutes

- Profile produced during manufacture
- Semi chemical flute for strength and humid conditions – mainly virgin fibre straight from the tree
- Recycled flute for general performance – recycled fibres

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Corrugated Flute Profiles

“B/C” Flute 7mm

“B/E” Flute 4mm

“C” Flute 4mm

“B” Flute 3mm

“E” Flute 1.5mm

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Cereals

- **Typical shelf life** of products made from cereals depends on the quantity and quality of oil contained in them.
  - Low oil (1.5 – 2%) – wheat, barley & rice have a *longer* shelf life (2 – 3 years) than
  - High oil (4 – 11%) – oats (6 months – 1 year).
- Conditions for optimum shelf life are
  - Cool (below 70°C), dark, dry and airtight atmospheres.

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Glass

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Glass

- Good gas & moisture barriers
- Promotes “Quality”
- Ideal for beverages
- Recyclable
- Not a good light barrier
- Susceptible to breakage
- Heavy

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Main strengths of glass containers

- High strength
- Can be sterilized
- Closures can be resealable
- Good barrier
- Transparent or include selective light filters
- Show evidence of tampering
- Have seal integrity
- Sustainability

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Main weaknesses of glass containers

- Heavier than other options
- Brittleness
- Susceptible to breakage
- Surface scratching
- Production line efficiency
- Light induced deterioration of products

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Types of caps

– Twist-off

– Push-and-twist (PT closures)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Types of caps

- Pressure seals
  - Crown and Twist Crown

- Eurospin

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI  
food and drink innovation

## Types of closures

- Corks or Bungs

- Swing top

- Induction sealing: Heat sealed or adhered plasticized aluminium

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI  
food and drink innovation

## Sustainable materials

- Starch – can be home composted
- Polylactic acid (PLA) – industrial composting
- Cellulose – home composted
- Fibre – by product of sugar/palm cane

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

## Commercial Applications

- Composting - bags and sacks
- Food service tableware - cups, cutlery, plates
- Packaging - film wrapping, laminated paper, food containers
- Agriculture - mulch film, nursery pots, plant labels

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

Campden BRI   
food and drink innovation

# LEGISLATION & SPECIFICATIONS

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## What is in the specification?

- Legal aspects : Authorized uses
  - Food contact approval
  - Migration testing
  - Residual testing
- Technical aspects
  - Information needed to know if the product will be suitable for the proposed application

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Example : Technical specifications of a plastic pouch

Property	Value	Unit	Test method
Width	110±1	mm	Ruler
Length	170±1		
Thickness	100±7	μ	Micrometer
Seal strength	Over 5.0	kgf/15mm	ASTM F 88
W.V.T.R.	1.2	g/m <sup>2</sup> -day	ASTM F1253 (38°C, 90 %RH)
O.T.R.	2.7	cc/m <sup>2</sup> -day	ASTM F1253 (23°C, 50 %RH)
Tensile strength (LD/TD)	45/44	N/mm <sup>2</sup>	ASTM D 882
Leakage test	no invisible leaks		JIS Z 0238
Retort test	No delamination		Pilot retort (125°C, 30min)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Product-Packaging Interactions

- MAP (Modified Atmosphere Packaging)
  - Gas mixtures
  - Selective packaging (gas barriers)
- Canned Foods
  - Tin (elimination of oxygen - red colour in canned tomatoes)
- Flavour Changes
  - Scalping (d-limonene)
  - Taints (styrene)

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

## Other Factors

Ageing Population  
Easy open  
features  
Malicious  
contamination  
'Overpackaging'

Alan Campbell – Campden BRI – United Kingdom – DIFSC – November 2014

# Thank you
